

Q2 — data touched per pass

(C) full-data passes (D) shrinking candidates

chunk-skip (§4)
(A)+(D)+(F)
sound skip,
no scatter needed

GPU radix select
(B)+(D)+cheap (F)
atomic histograms
+ scatter compaction

no scatter:
(D) unreachable

shipping bitonic
(A)+(C)+(E)
 ≈ 2 cyc/elem every pass,
zero decisions

Blackhole corner (§3)
(B)+(C)+(F)
threshold bisection;
81-cyc rendezvous

(A) comparison networks

(B) counting / partitioning

Q1 — winner identification
